AutoCAD is a feature rich product that has served the design community well for over 25 years. And like most CAD products, AutoCAD has its share of shortcomings, limitations and frustrations. These lists include features that are either missing or are not as robust as those in competing products. Autodesk has been known to add new features or enhance existing ones as quickly as every other major software company. So while you are reading this you may find new or better features in other products that you should consider. While AutoCAD has had many significant updates over the years, version history does not indicate the actual dates when the changes were implemented. Many of these changes are invisible unless you have AutoCAD under a debugger. In many cases, the behavior of the product has not changed, but AutoCAD may not be able to find the behavior in a script. While this list does not cover all the possible shortcomings and limitations in AutoCAD, it is by no means an exhaustive list. Remember to use the most current version of AutoCAD and update scripts as new versions are released. Do not use this list as the sole source for your AutoCAD installation. Use it as a guide and reference. Common Script Shortcomings AutoCAD has many shortcomings and has been known to exhibit some peculiar and quirky behaviors in a script. It does have a robust application-only script support that will give you much control over the behavior of your AutoCAD application. However, AutoCAD scripts are not easy to write and understanding the details and nuances of AutoCAD API is a daunting task that requires a bit of programming knowledge and experience. When creating and modifying AutoCAD scripts, always keep a test drawing in mind to determine whether the script is working as expected. For example, if you are modifying the Dimension tool to exclude a feature, there should be a way to test this. We have come across a few scripts that had issues that could not be easily determined until they were first executed in a test drawing. Some of these scripts had some bugs that were not immediately obvious. For example, the Set Current Point to object is one of the most common and convenient scripts. In some circumstances, this script will not perform as expected. For example, this script will often incorrectly attempt to set the point of the last selected object or the current point. The following listing shows a macro that fails to work properly. #standard

2D 2D and 2.5D 2D Drafting uses the 2D Drafting API. The original version of AutoCAD Product Key was designed for drafting 2D structures on a 2D plane. In AutoCAD release 2013, a new version of this API was developed to allow creating 3D models using 2D planes and 2.5D models using 2.5D planes. In AutoCAD 2012, this was replaced by the AutoLISP API. 2D drawing AutoCAD's default command line/batch processing dialog allows batch execution of drawings stored in a file. 2D drawing can use the following commands: AutoCAD does not support the curve fitting and contour generation algorithms as of release 2013. AutoCAD supports the 2D editing tools, layer editing, model space editing, linear and angular constraints and the drawing-related commands (e.g., Line, Rectangle, Polyline, Arc, Ellipse, Text, NPOINT, NWINDOW, TEXTPOOL, TEXTVECTOR, etc.) These commands can be executed either as command-line or batch commands. In AutoCAD 2012, the commands were replaced with the script language AutoLISP. 2D drawing can use the following commands: AutoCAD does not support the curve fitting and contour generation algorithms as of release 2013. Autodesk DWG Viewer supports the 2D and 3D viewers. AutoCAD does not support the version control, drawing synchronization, database linking, etc. 2D drawing can use the following commands: Draws a path using the path tool. Draws a polyline using the polyline tool. Draws a polyline using the Line option of the polyline tool. Draws a polyline using the direct-line tool. Draws a polyline using the vector tool (for 2D curves). Draws a polyline using the direct-line tool (for 2D curves). Draws a polyline using the direct-line tool (for 2D curves). Is it time to take action? In 1972 a nationwide conversation took place regarding the U.S. constitution. The conversation continued to the present day, with scholars, activists and people all across the country continually contributing their thoughts and ideas regarding this monumental document. Since 1972, U.S. citizens have been debating whether or not the U.S. government is acting in the best interests of the citizens of the United States. This debate has shaped the world that we live in today. The last three decades have seen extraordinary amounts of new regulations and legislation introduced by our federal government. This legislation and regulation has been put in place to protect our rights as U.S. citizens, yet it has led to the erosion of our freedoms. Our individual rights have been undermined and our freedom has been taken away. During the early 1900s many Americans got caught up in the hysteria of a new political movement. The early Progressive Movement brought about many positive changes in society. Due to their efforts, the United States would gain universal literacy, eliminate child labor, and provide government assistance to the poor. These changes to society would lead to increased prosperity and prosperity would allow for an increase in leisure time. It was also the early 1900s when the concept of an activist government started to gain more influence. Now, over a century later, the balance of power has been tipped. Activists in government have started to dictate what is best for the people. They dictate what kind of medical treatment we will be allowed and whether or not we will be able to hunt, fish or do other things that are very important to our survival and quality of life. The key to our survival as a nation is to be able to control our own destiny. This includes being able to determine the types of regulations that are put into place to regulate how we live and what we do. As a nation, we should be able to decide how we want to live and what regulations will help us to do so. We as citizens need to have the right to determine our own destiny. The time has come for the people to take action. It is time to stand up for our individual rights. It is time to stand up and let our government know that we are sick and tired of being made to suffer from legislation that does not serve us. It is time to let our representatives know that we are fed up with being forced into a world that we do not agree with. It is time for people to speak out and get involved in what
