Compact disks are data storing devices which include a read only memory known as a compact disk read only memory (CD ROM) or a writable memory known as a compact disk-rewritable (CD-R) or a compact disk recordable (CD-RW) wherein information is encoded by embossing pits or recordable pits are placed at a predetermined position on the surface of the compact disk. Compact disks are convenient to use and are widely used as video disks to view movies and music disks to listen to music. Conventional compact disk players available in the market are all manually controlled and typically have an input device for manually inputting operation instructions, an output device for displaying the output of an information retrieval apparatus and a processing device for driving and controlling the player's internal circuits and data. Therefore, a compact disk player is quite inconvenient and cumbersome to use. What is more, compact disk players available in the market are prone to memory failures and are not able to verify the authenticity of disks. It is therefore a primary object of the present invention to provide a compact disk player which is automatically controlled and is capable of verifying the authenticity of disks. It is a further object of the present invention to provide a compact disk player which is convenient to use and is easy to operate. It is still a further object of the present invention to provide a compact disk player that is free of failures. In accordance with the present invention, a compact disk player comprises a storage unit for storing the primary information including index codes which 1cdb36666d
