The Game World

The war in the Pacific plays out in four major theaters. You can command American, Japanese, Soviet, or Chinese ground forces, air power, and naval units. You can also play as the Home Front as well as the enemy's.

The game plays out in several stages. In the first, you can be given the theater, and choose ground or air forces as primary units. Alternatively, you can define air and ground forces, and use the rule simulating limited war to start the game.

In the second, you can set strategy with your commander, engage the enemy in a two-player move-by-move battle, or quit the game.

In the third, you can play single player, with a variety of AI opponents. This is the hardest level. Beating an AI opponent is difficult even with the Help and Restart options available. Beating the stats for the AI is possible, but requires expert positioning.

In the fourth, when one player is eliminated, the remaining AI opponents advance to the inevitable conclusion, with even more advanced advantages.

In each theater, the map is divided into zones. Zones are hex maps where no forces from different factions are allowed to occupy. Each zone is divided by sea zones (as in a sea battle) and land zones. Each land zone has a border, and above and below is a layer of overhanging clouds. In this, the attacker may attack. When attacked, the overhanging clouds limit the attacker's range for hitting the defender.

Aircraft are dealt with in a separate section. Airpower is limited to the number of zones that an aircraft can fly over. A unit may not enter a zone that is not eligible for it's type of aircraft.

Covering the heavily covered areas of the Pacific Ocean is an especially challenging problem for your forces - do you avoid being strafed, or do you go after the opposition, reducing your losses?

Or do you wait until after

Strategic Command WWII: World at War was an active real-time strategy game, released in 2009 for the Windows platform. The game is loosely based on the real-time strategy game series of the same name, developed and published by Microsoft Game Studios. Players control forces along with billions of Earth's armed and patriotic citizens and beings, fighting in a fictional version of World War II, a darktime conflict that pitted the Axis powers against the Allies. Although the game was announced at the same time as other World at War-themed titles such as a Facebook game by Eidos, Rise of the Triad HD, several months passed before Strategic Command II arrived. This delay led to a large outcry from fans of the series, with many expressing disappointment and suggesting that Microsoft had further abandoned the series after the high-profile failures of the first game. One month later, Mythological Inc. announced that it had acquired the rights to develop a new game in the series. A closed beta was announced for the upcoming Str Legends Studio game on November 15, 2014, and the game was announced to be released in Spring 2015. Gameplay The game takes place in a world called Strangereal and uses the United States Armed Forces and seventeen real-life military divisions, including the US Army, US Navy, US Air Force and the US Marine Corps. Besides the nineteen main factions such as the British Royal Air Force and the Free French, there are also two fictional ones, the Italian forces of the Italian Kingdom and the Spanish Expeditionary Army, with their own leader and military divisions. Players are able to declare war, attack or ally themselves with one of these factions. In addition to these national forces, there are also five different empires, which range from wealthy to technologically advanced to totalitarian. As players play through the game, they earn money, which can be converted into credits, and as a player advances through the campaign, more and better military units become available, as well as a vast array of new equipment and technologies. Players may set a single player (SP) or multiplayer (MP) game, which plays through eight missions. The first seven of these are based on campaigns, which lead to a final mission set in a different time period, with new factions becoming available as

the campaign unfolds. During some of the scenarios, players are able to play through scenario mode (SC), which lets them choose from a selection of maps (which can be altered after the mission is complete), set a variety of side objectives
