A loading symbol is a set of characters or symbols that indicates a page cannot be viewed right now due to the server load or some other timeout. Elliott designs loading symbols with a general expectation that they are universally acceptable to the community. Unless there is an issue with a particular symbol, they are not considered a part of the standard design language of the platform. Loading symbols are only displayed in the `/auth` screen. This allows the system to load the page quickly and appropriately display the login form. ## How can I make a loading symbol? The `/auth` screen loads the page in a `` tag. Each of these elements has a particular meaning: * `/auth`: Indicates that the page loads into the `` tag. * `/error`: Indicates that the page did not load. The `` tag contains a brief error message indicating why the page did not load. * `/loaded`: Indicates that the page load completed successfully. The `` tag contains an error message indicating why the page did not load. **Note**: The symbols from the example below **will not** appear in the `/auth` screen on a Storj client network. This is because Elliot believes the symbols help developers, not end users. ```sh # empty space

For the past 15 years the dominant technique for determining the base sequence of DNA has been the Sanger method. (Sanger et al., Proc. Natl. Acad. Sci. USA 74:5463-5467, 1977) This method uses immobilized DNA fragments as templates for DNA synthesis. The method proceeds via the use of chain-terminating DNA dNTP analogs which cause DNA synthesis to terminate in the presence of ddNTPs. Because of this, the DNA fragments can be individually separated into their respective regions, and any missing bases in a region can be readily identified by selective conversion of 6d1f23a050
