One of the most common ways to help a photo look more natural is to remove part of it. In figure book pages for example, it's always attractive to fill the empty space with something. And similar is often true for wallpapers. One way or another, we like to fill in our empty space. Luckily, most things have been around long enough that there are lots of stock pictures and HD video with common scenes. And common scenes tend to be the same. So, while the individual elements will keep changing, the stories we tell ourselves about everyday life will pretty much remain the same as long as people are around to tell it to us. You can give your photos a professional touch by enhancing colors, sharpening the image, blooming flowers, removing noise and applying special effects. You can choose from a wide range of brushes and colors, create new ones from scratch or start with an image or photo effects template. If you are a professional photographer, a darkroom print works. I've personally never seen a pro stock library that has more than seven exposures of the same image. With the professional editing software you are able to open a large number of images without having to open them separately which can be time consuming for the professional photographer who has a time limit at hand. This is why it is key for publishers to understand what the professional editor needs. First of all they demand the ability to open and work on a large number of images at once to be able to process them timely.
