New In: It has a new version of fill tool which fills a place in your image with a color from your image, instead of just copying the color from the brush. This tool is not very useful as it cannot be used to resize an object. Adobe Photoshop Elements 2021 allows us to resize any image we place in the desktop. It also provides crop tools at the same time. The crop tools appear when we place the image on the desktop. We can resize the image any way we desire as well, up to 4 times its original size. This is Photoshop at its best. Up until now, this was the best place where I felt Photoshop fell short in terms of my needs (and vice versa, too, really). This is because I usually need to resize an image 2 or 3 times the size I took it. The crop tool, on the other hand, is actually quite sufficient, so, in the case of a badly composed image, with many distracting elements, or a badly cropped image, Photoshop Elements always let me know when I have a problem. If the above is true, then it could be argued that Photoshop Elements should always execute "auto-fix" before I continue to edit the photo. This, and a stock image library, would be sufficient. But, I would say that if you always want to crop an image before editing, be sure to make every attempt to crop, or resize, the image manually through the crop tool, which is convenient. Personally, I prefer to fix the cropping imperfections manually. Not a lot of new features in this version. However, in my opinion, a bit more of the core functionality is what might have been a bit too much of a departure from what Elements is used to. Certain workflow boundaries are being blurred due to the ephemeral nature of every camera. This blurring of boundaries makes it feel a lot more like basic image editing than it should.
